

DoorProtect

The device detects the door or window being opened by means of British-made hi-end reed switches on which the magnetic field acts. It can operate in the transmitter mode, sending a signal from the wired sensor to the hub.

Tech specs

Classification	Point magnetic and contact radio channel security detector
Sensing element	Reed switch
Activation threshold	Small magnet — 1 cm Big magnet — 2 cm
Temperature sensor	Available
Battery life	Up to 7 years
External contact	Yes
Communication range with central unit	Up to 1,200 m in an open space

External contact is available for connecting third-party detectors

Operates up to 7 years without battery replacement

Includes magnets of various sizes for installation on narrow frames and door frames
